

STELLAR Mirror

JAKE PHIPPS

WWW.JAKEPHIPPS.COM

Part of the award winning Stellar Collection - the Stellar Mirror is inspired by the precious qualities of naturally forming amethyst geodes and machine cut diamonds. The large expansive surfaces on the mirror are in stark contrast to the turbulent seam of individually sized and angled mirrored sections that run through them.

This change in surface creates an optical dispersion that breaks down the light and the surrounding environment, delivering each piece to the eye as one sparkling entity. As the ambience of the environment changes throughout the day, so too does the colour and lustre of the mirror, creating an ever changing focal point to a room.
